

Project: Integral management

It is a product designed to work in WEB environments, which facilitates the way of working, managing sales, authorized users, administrators, inventories as well as company suppliers.

It will have stock control and will be linked to its virtual store, making the corresponding changes.

For whom it is?

Any person who has online commerce, such as e-commerce, a virtual store, synchronizing the existing database of the same e-commerce with the Management system, thus maintaining all the history of sales, budgets, RMA, stock, the portfolio of customers, among other uses.

Purpose

Provide a technological solution for the sales area and administrative management of a company or enterprise in a virtual way using e-commerce.

So that?

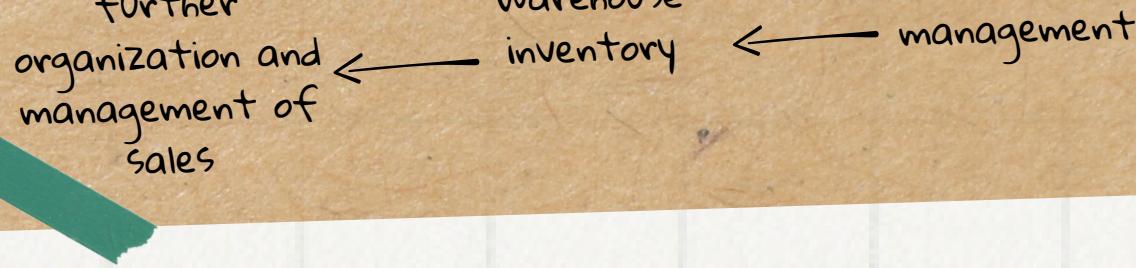

By systematizing the data, a more efficient work will be achieved.

The online system will have the necessary requirements and uses, to be able to enter from anywhere, adaptable to the virtual store.

100%

efficiency

Advantage

Not only for the company,
but also for the user,
administrator or client

How will it be done?

- 1- Creation of administrator, users and clients.
- 2- Validations will be performed by the administrator.
